

Radcon Formula #7 Specified for use on IBC 2003 Bridge Award Project for waterproofing concrete deck!

Rama 8 Bridge Engineer awarded Eugene C. Figg Jr. Medal for signature bridges.

The 2003 International Bridge Conference held in the city of bridges, Pittsburgh, Pennsylvania provided an opportunity to showcase outstanding bridge projects from around the world. Of particular note was the identification of the Rama 8 bridge project in Bangkok, Thailand. It was recognized as a single recent outstanding achievement in bridge engineering that, through vision and innovation, provides an icon to the community for which it was designed. Express Polymers, Inc. recognizes this engineering achievement by Buckland & Taylor, Ltd. and offers our congratulations. Express Polymers, Inc. is the distributor of Radcon Formula #7 that was used to waterproof the concrete deck on this bridge.

Radcon Formula #7 specified for concrete deck waterproofing on Rama 8 bridge project.

Radcon Formula #7 waterproofing was specified to protect the concrete on the Rama 8 bridge deck by the engineers and supported by the project managers as the most appropriate

choice for waterproofing this outstanding structure's concrete roadway. Express Polymers has a short video of the installation of Radcon #7 on the Rama 8 bridge. This video illustrates the ease of Radcon #7 application on the Rama 8 bridge deck. The simplicity of the installation belies the huge benefits of lifetime waterproofing protection that is achieved in one application of Radcon Formula #7.

Global track record for Formula #7 now available in the U.S.

Radcon Formula #7 has achieved global prominence for protecting concrete on all types of concrete structures and is now available through Express Polymers, Inc. (Phone 888.433.6922). Formula #7 is the only material specified for use on Norwegian Railway concrete structures. Since Radcon #7 is non-toxic it is suitable for use on potable water structures even under severe hydrostatic pressure including water treatment plants, water parks, aquariums, water storage tanks, sewage treatment plants, etc.

The 28 year history of Radcon Formula #7 identifies its unique capability to not only seal the concrete matrix in new or old concrete, but also the cracks and future hairline cracking. No other product can provide such outstanding and vital protection to our concrete infrastructure.

To learn more about the many benefits of Radcon Formula #7 please call **Express Polymers, Inc** at **888.433.6922**. We are your source for outstanding concrete construction and preservation products.
