

MENDER DOES IT AGAIN AND AGAIN AND AGAIN

Express Polymers received a call for help with a sick bridge deck that was refusing to accept the repairs of the famous names in concrete repair. We won't mention the names here, as you all know which products they are. The problem was that this heavily traveled bridge was coming apart shortly after each repair was completed. Obviously this is frustrating to the good people who perform the work under very trying circumstances. It is even more frustrating to the managers who diligently evaluate alternative methods of repairing the rapidly emerging potholes and try to sift through all the gobbledygook spread by the big names in concrete repair products. And of course the ultimate frustration comes on the part of the traveling public who must regularly endure time and fuel consuming delays and possible accidents from the all too often routine pothole reappearances and subsequent lane closures.

In this case the situation demanded nothing less than the best concrete repair material that we have – 10-Minute Concrete MENDER. This product would address all of the concerns that were identified.

First they needed a product that would provide a fast return to service (minutes) and remain in place for more than the few days to few weeks being experienced with other typical repair products. It had to be easy to use and had to work with a latex modified concrete, one of the most difficult materials to repair because of its mechanical properties. We took on the challenge using a product with a funny name – MENDER. But after several weeks MENDER has been performing better than any other material.

We weren't surprised at the results as MENDER provides fast, permanent concrete repairs for

any size pothole and at any temperature. And no saw cutting is required to create vertical sides thus making pothole repairs even faster and easier.

Check out these before and after pictures taken minutes apart.

To learn more about the many benefits of 10-Minute Concrete MENDER please call **Express Polymers, Inc** at **888.433.6922**. We are your source for outstanding *EXPRESS-WAY*_{sm} concrete repair and preservation products.
