

## ACCUFLEX FOR ANY CONCRETE SURFACE REPAIR

When a contractor came to us looking for an economical product to repair a concrete surface we suggested a two-part approach. First it is critical that the base be rock solid. If it isn't the surface won't be any better. So 10-Minute Concrete MENDER was selected to repair the cracks and spalls in the sidewalk. Then we suggested using Accuflex Coatings system to repair the surface and provide an attractive non-slip surface. And of course the client wants his sidewalk back in service in minutes. And that is exactly what the contractor did. Check out the before and after pictures shown below.

Accuflex is an outstanding two-part polymer system (4:1) that is easy to use and sets quickly for fast return to service. You can apply it as thin as a sheet of paper to a foot thick if desired. Aggregates may be added as fill. And the surface may be finished with crushed flint or basalt for a hard durable surface finish. Accuflex is available in several colors when ordered in larger quantities.

Note the attractive non-slip surface.

Accuflex provides a fast economical durable concrete repair any thickness that may be needed and is ready for service in minutes. Call for detailed literature.

To learn more about the many benefits of ACCUFLEX please call **Express Polymers, Inc** at **888.433.6922**. We are your source for outstanding concrete construction and preservation products.
