

High Pressure Injection – A Japanese Innovation

RADCON
FORMULA #7
WATERPROOFING CONCRETE FOR LIFE

So what is the first rule for a RADCON Formula #7 application...? NEVER treat wet concrete as the product cannot absorb in.

So what does this product application innovation by Japanese distributor, Rad Japan, mean?

It means every Japanese rail tunnel and road tunnel being highly cost effectively RADCON Formula #7 injected to stop water permeation through failed leaking construction joints.

1) Drilling holes in preparation for nipple placement

2) Nipples in place, RADCON Formula #7 being injected

3) High pressure RADCON Formula #7 injection taking place

4) Leak prior to RADCON Formula #7 injection

5) Post injection application – a RADCON Formula #7 total lifetime waterproofing solution
